

Thomas Vitale is a software engineer and architect specialized in building cloud native, resilient, and secure enterprise applications. He designs and develops software solutions at Systematic, Denmark, where he’s been working on modernizing platforms and applications for the cloud native world, focusing on developer experience and security.

Some of his main interests and focus areas are Java, Spring Boot, Kubernetes, Knative, and cloud native technologies in general. Thomas supports continuous delivery practices and believes in a collaboration culture aimed at working together to deliver value to users, customers, and businesses. He likes contributing to open source projects like Spring Security and Spring Cloud, and sharing knowledge with the community.
