```
$ docker push ghcr.io/<your_github_username>/my-java-image:1.0.0
```

Go to your GitHub account, navigate to your profile page, and enter the Packages section. You should see a new `my-java-image` entry. If you click on it, you'll find the `ghcr.io/<your_github_username>/my-java-image:1.0.0` image you just published (figure 6.7). By default, the repository hosting your new image will be private.
