Catalog Service by going into the project's root folder and running `tilt up`. Then, open a new Terminal window and run the following command:

```
$ octant
```

This command will open the Octant Dashboard in your browser (usually at http://localhost:7777). Figure 7.13 shows the Dashboard. The Overview page provides a picture of all the Kubernetes objects running in the cluster. If you followed along, you should have PostgreSQL and Catalog Service running in the cluster.
