Go to the Exchanges section again, select the `order-accepted` exchange, and in the Publish Message panel, insert an `OrderAcceptedMessage` object in JSON format, as shown in figure 10.14. When you're done, click the Publish Message button.

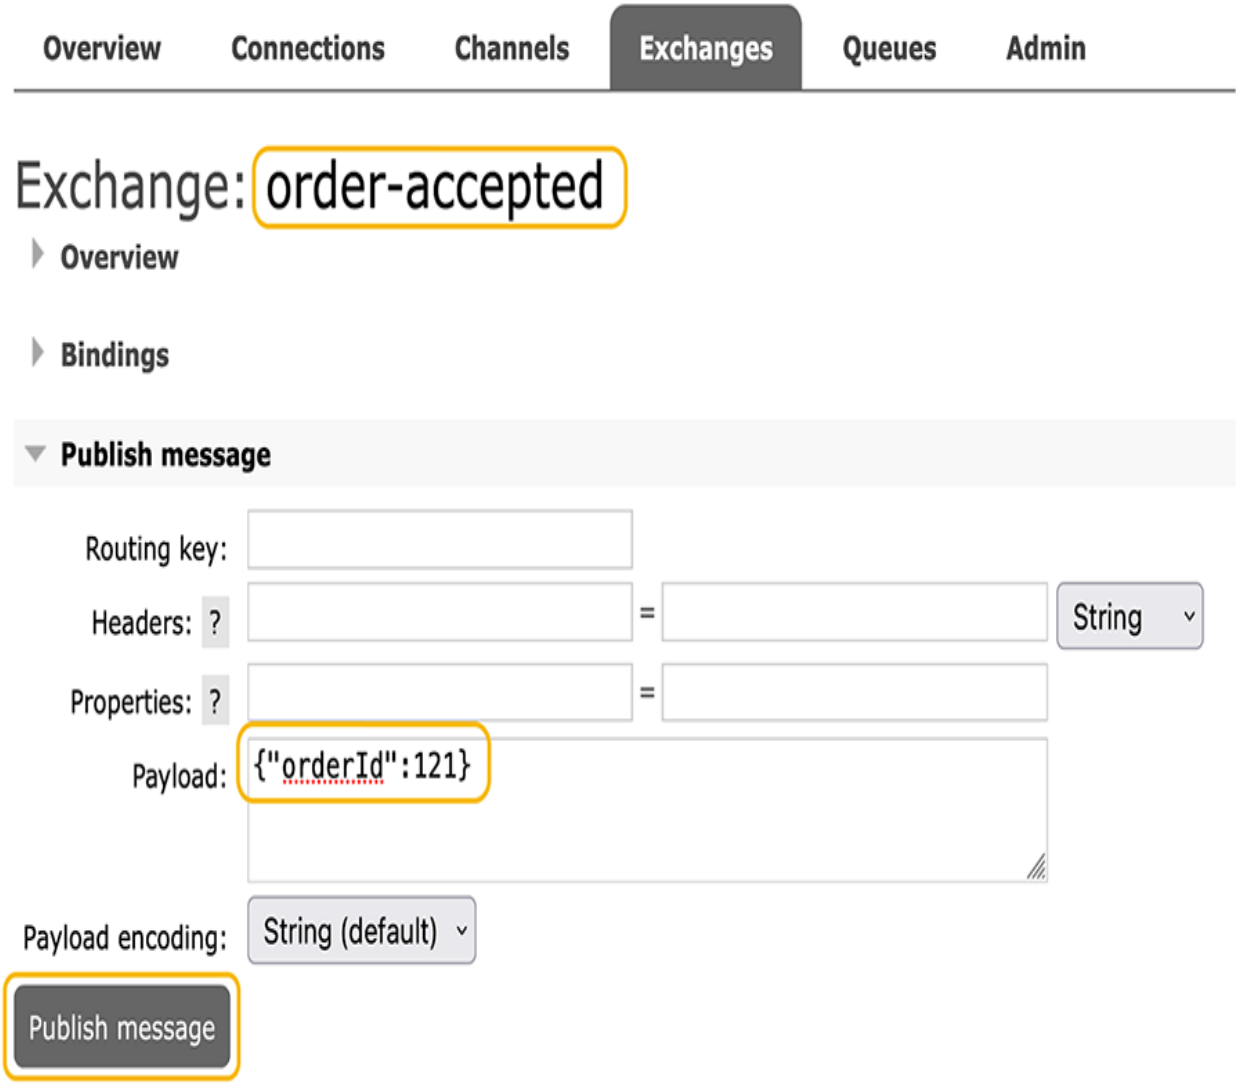

Figure 10.14 You can trigger the data flow in Dispatcher Service by sending a message to the `order-accepted` exchange.

In the application logs, you should see the following messages signaling that the data flow happened correctly:
