```
  @Test
  void whenDeleteBookWithCustomerRoleThenShouldReturn403()
    throws Exception
  {
    var isbn = "7373731394";
    mockMvc                                                          ❹
      .perform(MockMvcRequestBuilders.delete("/books/" + isbn)
        .with(SecurityMockMvcRequestPostProcessors.jwt()
          .authorities(new SimpleGrantedAuthority("ROLE_customer"))))
      .andExpect(MockMvcResultMatchers.status().isForbidden());
  }

  @Test
  void whenDeleteBookNotAuthenticatedThenShouldReturn401()
    throws Exception
  {
    var isbn = "7373731394";
    mockMvc
      .perform(MockMvcRequestBuilders.delete("/books/" + isbn))
      .andExpect(MockMvcResultMatchers.status().isUnauthorized());
  }
}
```

❶ Imports the application's security configuration

❷ Mocks the JwtDecoder so that the application doesn't try to call Keycloak and get the public keys for decoding the Access Token

❸ Mutates the HTTP request with a mock JWT-formatted Access Token for a user with the "employee" role

❹ Mutates the HTTP request with a mock JWT-formatted Access Token for a user with the "customer" role

Open a Terminal window, navigate to the Catalog Service root folder, and run the newly added tests as follows:

```
$ ./gradlew test --tests BookControllerMvcTests
```

Feel free to add more web slice autotests to cover GET, POST, and PUT requests. For inspiration, you can refer to the source code accompanying the book (Chapter12/ 12-end/catalog-service).
