Overview of the Spring landscape

Building a Spring Boot application

2.3 Containerizing applications with Docker

Introducing Docker: Images and containers

Running a Spring application as a container

2.4 Managing containers with Kubernetes

Introducing Kubernetes: Deployments, Pods, and Services

Running a Spring application on Kubernetes

2.5 Polar Bookshop: A cloud native application

Understanding the requirements of the system

Exploring patterns and technologies used in the project

Part 2 Cloud native development

3 Getting started with cloud native development

3.1 Bootstrapping a cloud native project

One codebase, one application

Dependency management with Gradle and Maven

3.2 Working with embedded servers

Executable JARs and embedded servers

Understanding the thread-per-request model

Configuring the embedded Tomcat

3.3 Building a RESTful application with Spring MVC

REST API first, business logic later

Implementing a REST API with Spring MVC

Data validation and error handling

Evolving APIs for future requirements

3.4 Testing a RESTful application with Spring

Unit tests with JUnit

Integration tests with @SpringBootTest

Testing REST controllers with @WebMvcTest

Testing the JSON serialization with @JsonTest
