In the case of problems with Argo CD, you can use the `argocd app get catalog-service` command to verify the synchronization status or directly use the web interface available at `<argocd-external-ip>`. For troubleshooting Kubernetes resources, you can take advantage of Octant or use one of the techniques explained in the last section of chapter 7.

15.4.2 Putting it all together

If you followed along and completed all the Polar Labs, you'll now have the whole Polar Bookshop system up and running in a production Kubernetes cluster in the public cloud. That's a huge accomplishment! In this section, we'll give it a try and refine a few last points. Figure 15.9 shows the status of the applications from the Argo CD GUI, accessible via the `<argocd-external-ip>` address discovered earlier.
