agent mode, collector deployment 83
agent mode, Prometheus 76
agents
  definition 3
  log routers 67–74
  metrics collection 74–77
  overview 66–67
  selecting 91–93
  telemetry costs of logs 24
AIOps 145
alert fatigue, avoiding 148
alerting, cloud operations 144, 146–155
alerting, metrics 33
Alertmanager 147, 149–154
all-in-one cloud provider offerings 121
  frontends 131–139
  selecting 139–140
AMA (Azure Monitor agent) 91
Amazon CloudWatch Agent 90
Amazon CloudWatch Logs 97
Amazon CloudWatch Metrics 103
Amazon CodeGuru Profiler 186
Amazon Managed Service for Prometheus 103
Amazon QuickSight 130
Amazon Timestream 103
anomaly detection 42, 145
Apache Cassandra 110, 135
Apache Druid 110
Apache Pinot 110
Apache SkyWalking 136
Apache Software Foundation (ASF) 135
Apache Superset 130
AppDynamics 138
Application Insights (Azure) 106
application-level metrics 27
application logs 67
application logs, Kubernetes 52–54
application performance monitoring (APM) 108, 137
ASF (Apache Software Foundation) 135
Aspecto 137
asynchronous services 200
attributes, signal correlation 214
audit logs, Kubernetes 54
auto-instrumentation 64, 79
Autometrics 193
autoscaling, serverless compute 56
AWS Distro for OpenTelemetry (ADOT) 90
AWS X-Ray 106
Azure Application Insights Profiler 186
Azure Monitor agent (AMA) 91
Azure Monitor Logs 98
Azure Monitor Metrics 103

B

B2I (business logic to instrumentation) ratio 16
backend destinations
  columnar datastores 108–114
  correlation layer 213
  costs of 114–115
  logs 97–101
  metrics 101–106
  overview 95–96
  selecting 114–118
  terminology 96
  traces 106–108
  vs. frontend 95
back pressure, ingesting signals 116
baseline signal value 42
Berkeley Packet Filter (BPF) 183
BI (business intelligence) 130
binary large objects (BLOB) 60
blameless postmortem, incident management 146
business intelligence (BI) 130
business logic to instrumentation (B2I) ratio 16
business metrics 27
business stakeholder, role of 6
