CLOUD / DEVOPS

Cloud Observability IN ACTION

Michael Hausenblas

Cloud native systems are made up of hundreds of moving parts. When something goes wrong, it's not enough to know there is a problem—you need to know where it is, what it is, and how to fix it. This book takes you beyond traditional monitoring, explaining observability systems that turn application telemetry into actionable insights.

Cloud Observability in Action gives you the background and techniques you need to successfully introduce observability into cloud-based serverless and Kubernetes environments. In it, you'll learn to use open standards and tools like OpenTelemetry, Prometheus, and Grafana to build your own observability system and end reliance on proprietary software. You'll discover insights from different telemetry signals, including logs, metrics, traces, and profiles. Plus, the book's rigorous cost-benefit analysis ensures you're getting a real return on your observability investment.

What's Inside

- Observability in and of cloud native systems
- Dashboarding, alerting, and SLOs/SLIs at scale
- Signal types for any role or task
- State-of-the-art open source observability tools

For application developers, platform owners, DevOps, and SREs.

Michael Hausenblas is a Product Owner in the AWS open source observability team.

Jamie Riedesel was the technical editor for this book.

"Incredible! This book gets you up to speed, and sets you up for the future. I was especially impressed with the depth and detail for continuous profiling, whose impact is only starting to be understood."
—Frederic Branczyk, Polar Signals

"Pairs a wealth of knowledge on cloud native environments with best practices and insights into observability. A must-read for cloud engineers."
—Daniel Gomez Blanco
Author of *Practical Open Telemetry*

"Take the right steps to protect your precious infrastructure from those pesky outages and incidents."
—Kit Merker, Nobl9

"Does a fantastic job distilling the key concepts for cloud observability. An important guide for practitioners."
—Ken Finnigan, Lumigo
