5.4 Trees

Another way to show hierarchical data is to lay it out like a family tree, with the parent nodes connected to the child nodes in a dendrogram (figure 5.13).

The prefix *dendro* means "tree," and in D3 the layout is `d3.layout.tree`. It follows much the same setup as the pack layout, except that to draw the lines connecting the

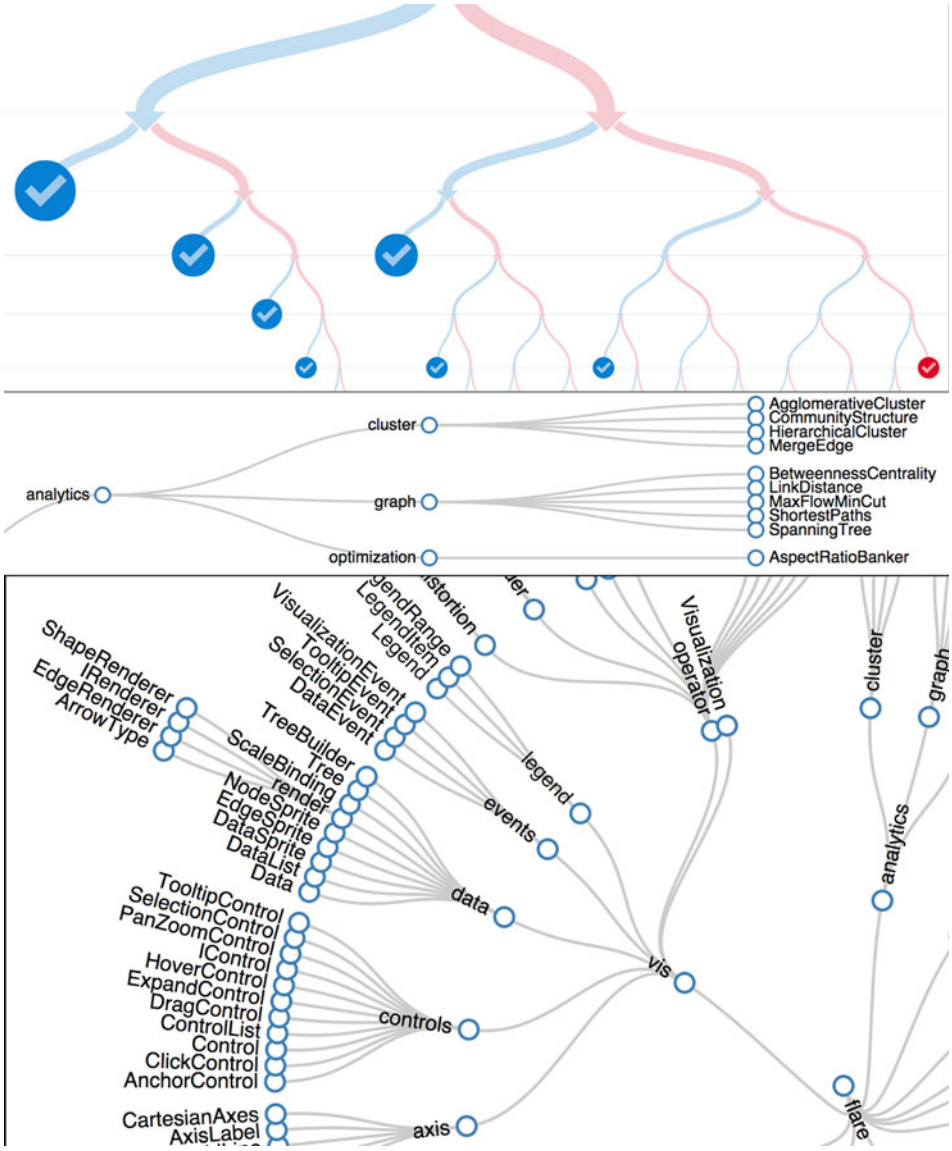

Figure 5.13 Tree layouts are another useful method for expressing hierarchical relationships and are often laid out vertically (top), horizontally (middle), or radially (bottom). (Examples from Bostock.)
