

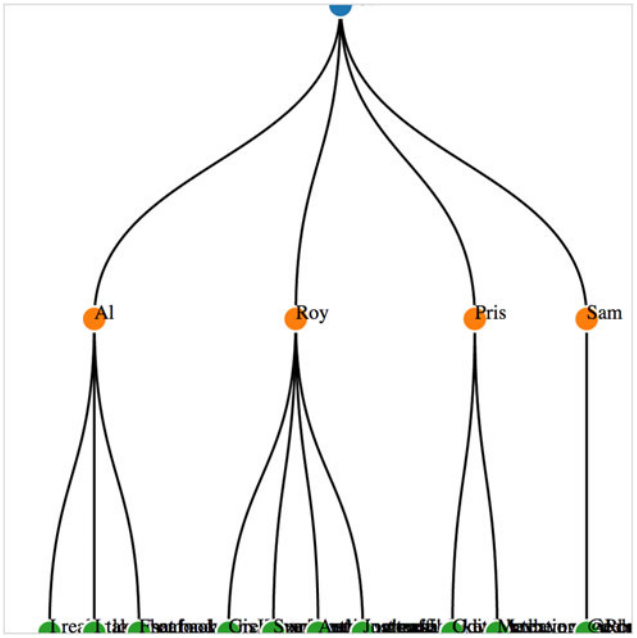

Figure 5.14 A dendrogram laid out vertically using data from tweets.json. The level 0 "root" node (which we created to contain the users) is in blue, the level 1 nodes (which represent users) are in orange, and the level 2 "leaf" nodes (which represent tweets) are in green.

The result, shown in figure 5.15, is more legible because the text isn't overlapping on the bottom of the canvas. But critical aspects of the chart are still drawn off the canvas. We only see half of the root node and the leaf nodes (the blue and green circles) and can't read any of the labels of the leaf nodes, which represent our tweets.

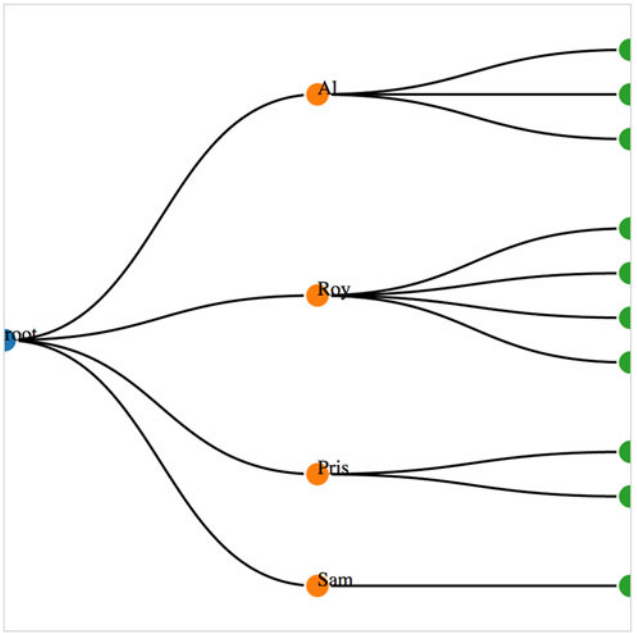

Figure 5.15 The same dendrogram as figure 5.14 but laid out horizontally.
