Part 1

D3.js fundamentals

The first three chapters introduce you to the fundamental aspects of D3 and get you started with creating graphical elements in SVG using data. Chapter 1 lays out how D3 relates to the DOM, HTML, CSS, and JavaScript, and provides a few examples of how to use D3 to create elements on a web page. Chapter 2 focuses on loading, measuring, processing, and changing your data in preparation for data visualization using the various functions D3 includes for data manipulation. Chapter 3 turns toward design and explains how you can use D3 color functions for more effective data visualization, as well as load external elements such as HTML for modal dialogs or icons in raster and vector formats. In all, part 1 shows you how to load, process, and visually represent data in SVG without relying on built-in layouts or components, which is critical for using and extending those layouts and components.
