

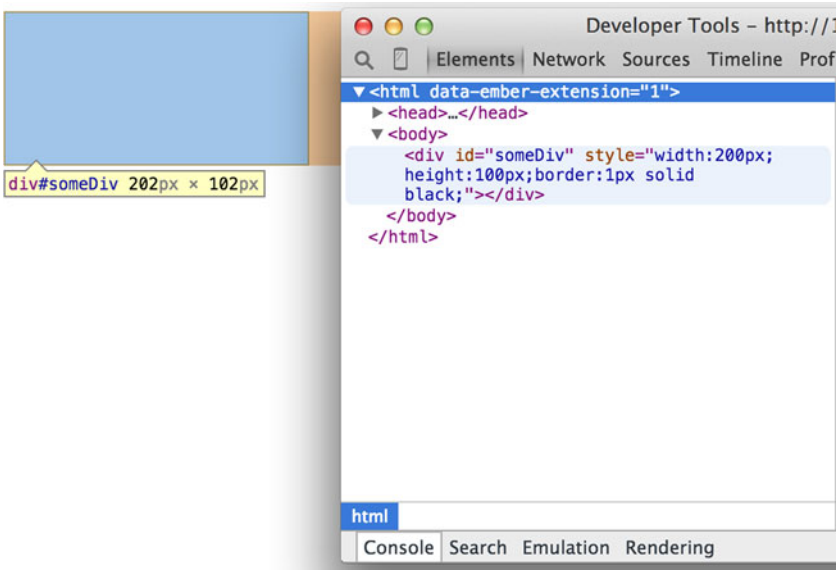

Figure 1.11 The developer tools in Chrome place the JavaScript console on the rightmost tab, labeled "Console," with the element inspector available using the hourglass on the bottom left or by browsing the DOM in the Elements tab.

> **NOTE** You'll see the console in this first chapter, but in chapter 2, once you're familiar with it, I'll show only the output.

The element inspector allows you to look at the elements that make up your web page by navigating through the DOM (represented as nested text, where each child element is shown indented). You can also select an element onscreen graphically, typically represented as a magnifying glass or cursor icon.

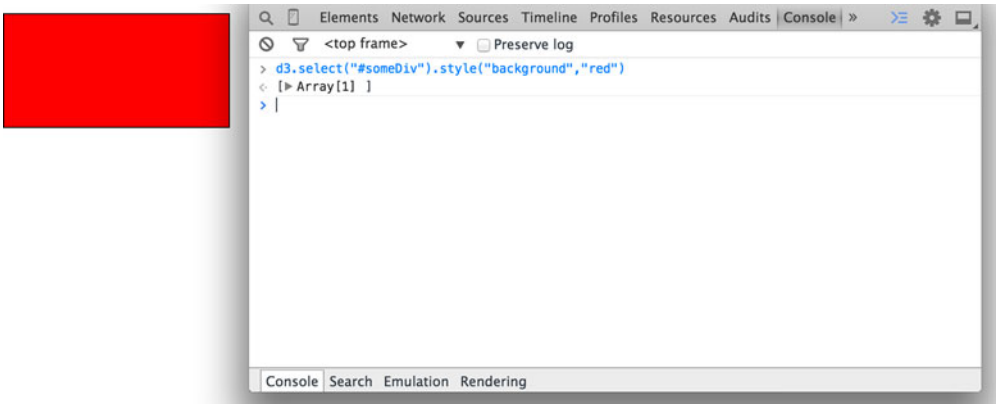

Figure 1.12 You can run JavaScript code in the console and also call global variables or declare new ones as necessary. Any code you write in the console and changes made to the web page are lost as soon as you reload the page.
