```
<g transform="translate(100,400) scale(2.5)">
   <circle r="2"/>
   <text>This circle's Label</text>
</g>
```

<PATH>

A path is an area determined by its `d` attribute. Paths can be open or closed, meaning the last point connects to the first if closed and doesn't if open. The open or closed nature of a path is determined by the absence or presence of the letter *Z* at the end of the text string in the `d` attribute. It can still be filled either way. You can see the difference in figure 1.21.

Listing 1.4 SVG path fill and closing

```
<path style="fill:none;stroke:gray;stroke-width:4px;"
     d="M 10,60 40,30 50,50 60,30 70,80" transform="translate(0,0)" />
<path style="fill:black;stroke:gray;stroke-width:4px;"
     d="M 10,60 40,30 50,50 60,30 70,80" transform="translate(0,100)" />
<path style="fill:none;stroke:gray;stroke-width:4px;"
     d="M 10,60 40,30 50,50 60,30 70,80Z" transform="translate(0,200)" />
<path style="fill:black;stroke:gray;stroke-width:4px;"
     d="M 10,60 40,30 50,50 60,30 70,80Z" transform="translate(0,300)" />
```

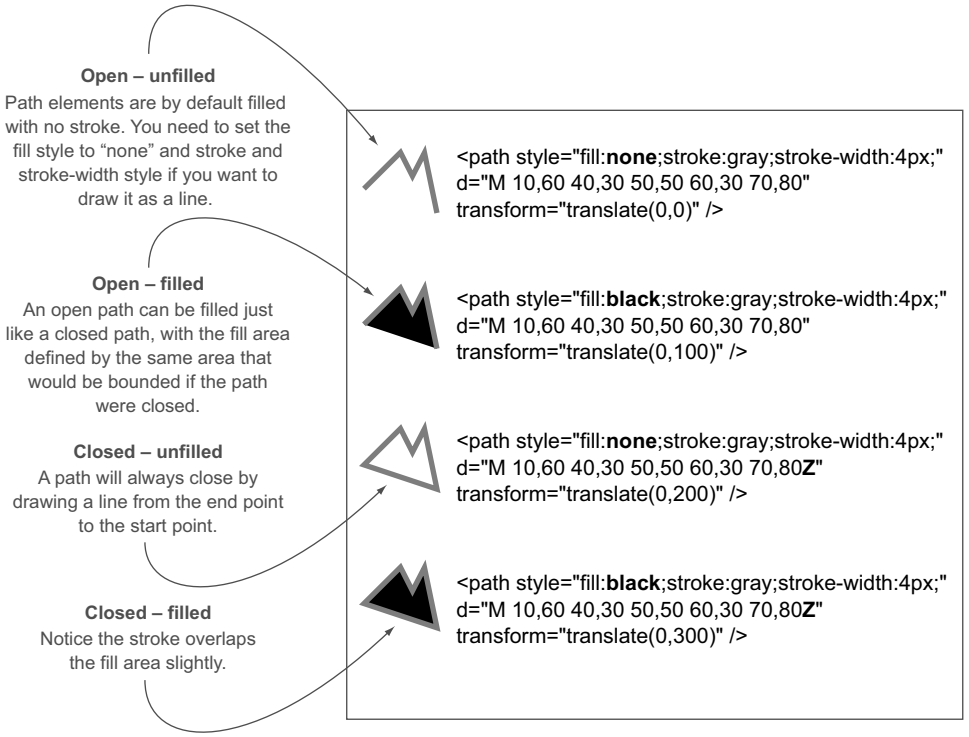

Figure 1.21 Each path shown here uses the same coordinates in its `d` attribute, with the only differences between them being the presence or absence of the letter *Z* at the end of the text string defining the `d` attribute, the settings for fill and stroke, and the position via the `transform` attribute.
