previous discussions will be accessible from the publisher's website as long as the book is in print.

about the authors

Jacek Majchrzak is a lead architect who implements the data mesh approach in the area of drug discovery. Jacek is a workshop facilitator with experience in moderating many techniques including event storming, domain storytelling, business capability modeling, and bounded context canvas. He also designed his own technique that helps discover and define data products in a domain-oriented way, which he calls a *data bazaar*. Jacek uses all these techniques to help people make the best possible decisions about their technology and strategy. His areas of expertise are domain-driven design, event-driven architecture, solution architecture, socio-technical system design, and architecture governance and strategy. He thinks that understanding business domains and needs is the key to a successful architecture. He blogs at https://jacekmajchrzak.com. Jacek is a husband and father of two, and a motorcyclist who is addicted to sports, especially aquatic ones.

Dr. Sven Balnojan is a data technologist and product person focused on helping the world extract more value from the exponentially growing amount of data. He's passionate about all things data, machine learning, AI, business intelligence, and many related fields. His endeavors include managing internal data teams and the transitions from being a service-oriented team to a platform-oriented team, as well as getting his hands dirty as a data developer in the fields of machine learning, data engineering, and Data DevOps. Sven holds a PhD in mathematics with a thesis in the field of singularity theory. He is the author of an opinionated newsletter, "Three Data Point Thursday." Additionally, he blogs at https://datacisions.com and appears in talks here and there over the internet.

Dr. Marian Siwiak is a jack of all data-related trades and a master of their integration with business operations. As a chief data science officer of Cognition Shared Solutions, he's a strategic-level data use consultant and the designer of the Trilayer Business Process Analysis framework, connecting process execution, data environments, and risk management. He has a track record of delivering multimillion-dollar IT, scientific, and technical projects
