

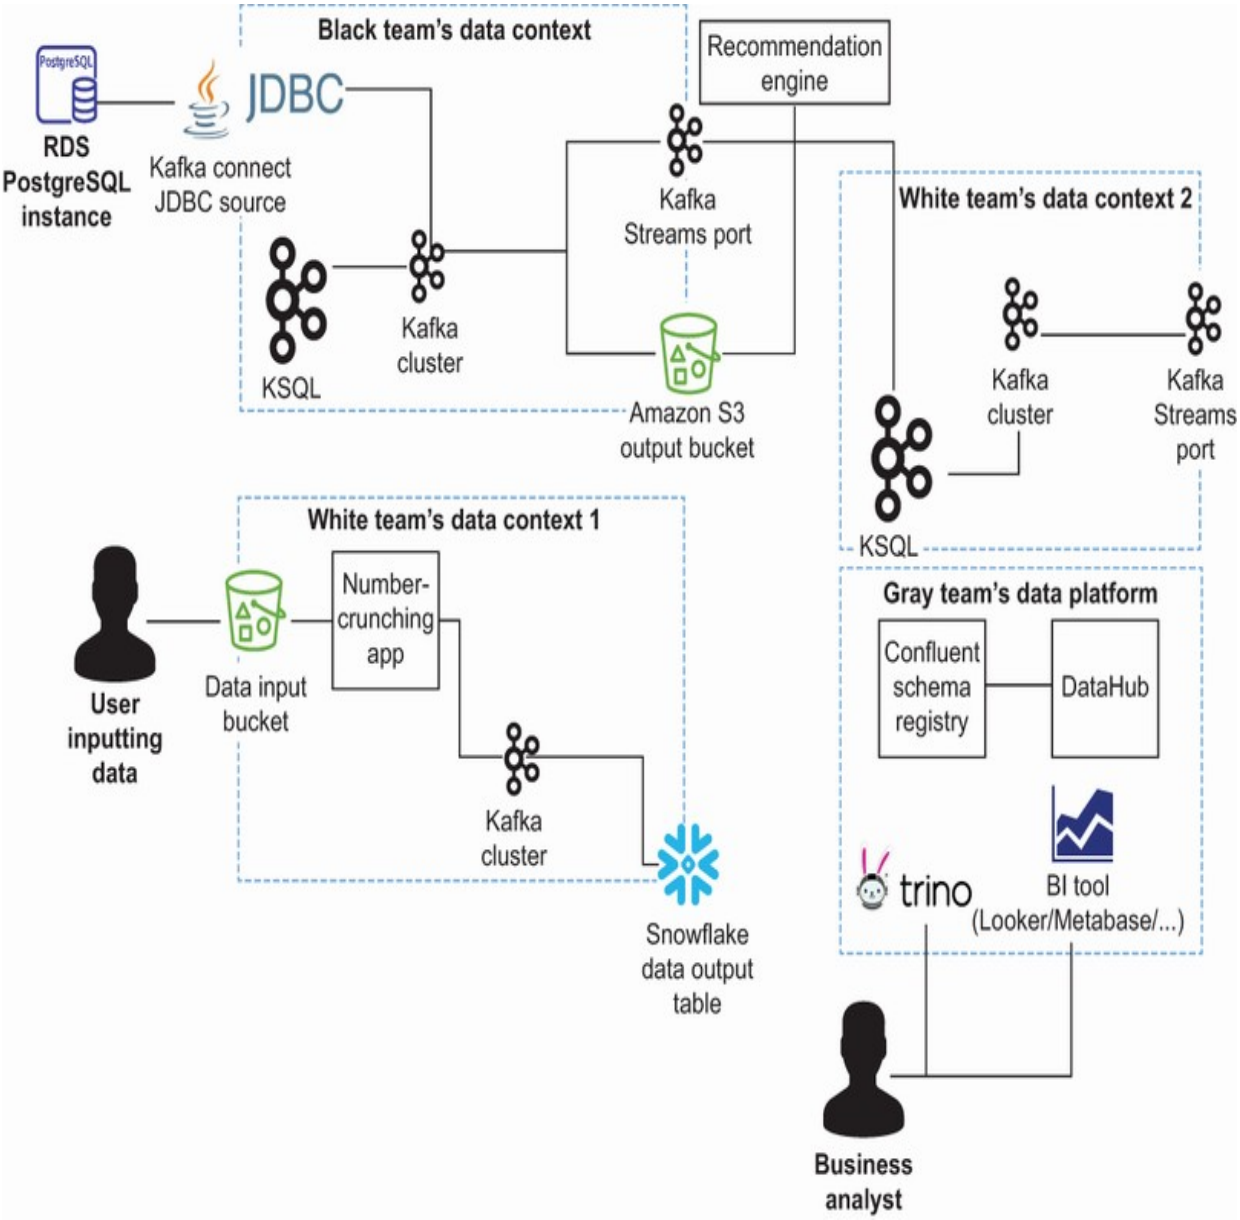

Figure 8.11 Two teams can technically implement data products utilizing Kafka.

Figure 8.11 depicts the setup. Take some time to see how data flows between the data products. Note that the figure is a bit reduced. Just as in the Databricks setup, the Kafka cluster here is a physically central piece of infrastructure, with logical separation on the levels, called *streams* and *topics*, the organizational units inside Kafka. The architecture uses two key Kafka technologies:
