Figure 9.2 A C2 (container level) example in the Messflix domain

Finally, we zoom into the component level (C3) in figure 9.3.

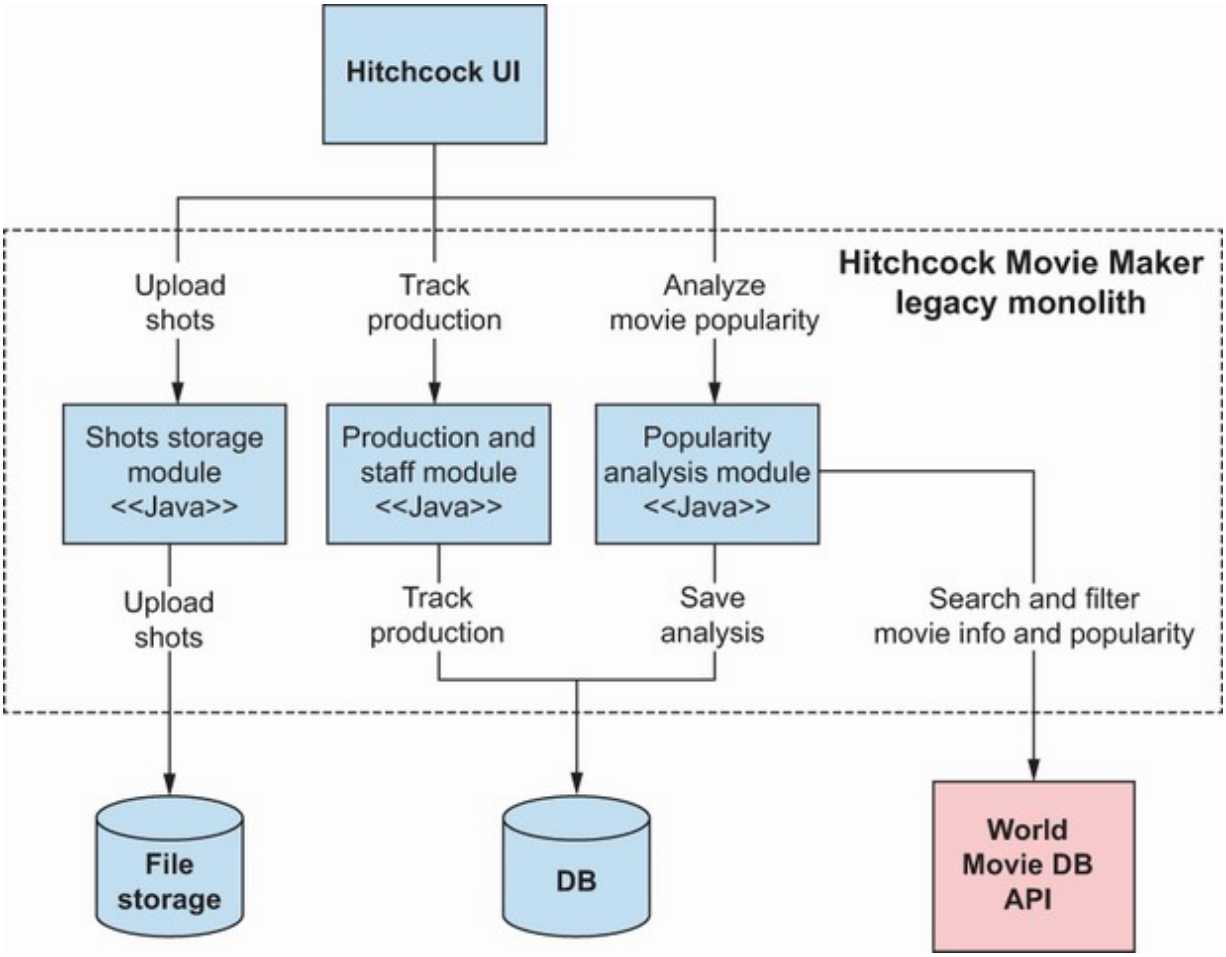

Figure 9.3 A C3 (component level) example in the Messflix domain

With such diagrams, we can understand the static structure of the Messflix architecture, but architecting is a process of decision-making, and to fully understand the design, we need to understand the architectural drivers (functional requirements, quality attributes, constraints, and principles) that lead us to those decisions.

We already know the structure of current solutions. But before we jump into the design of a data product, we need first to understand the architectural drivers that will guide our design.
