SET COST STATEMENT DATA PRODUCT REQUIREMENTS

The Cost Statement data product is derived from cost statement spreadsheets that are stored by the Production team as a part of the Hitchcock Movie Maker on the online drive.

NOTE If you are not sure how we designed boundaries of data products that we introduce in this chapter, refer to chapter 4.

Data will be exposed to two consumers: ERP for accounting purposes through the REST API, and the Financial Analysis data product for yearly and monthly financial reports prepared for the CEO.
