

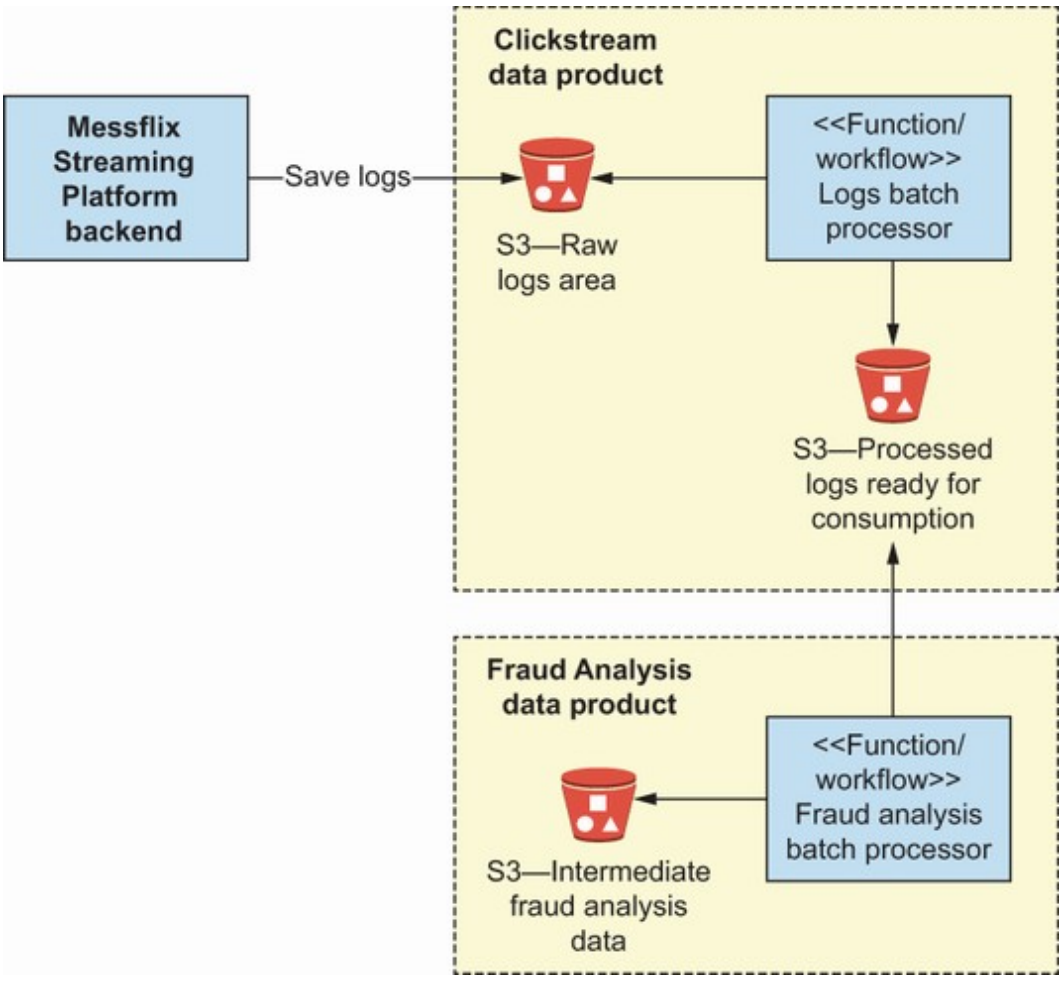

Figure 9.22 Using a data lake with the data mesh way of thinking

In this chapter, we looked at the architecture of a data product from multiple angles. We haven't touched all of the configurations and possible patterns that can be used, but we've given you the tools needed to make this kind of decision on your own.

Summary

- Architecture is a structure of related building blocks, but it is also a process of designing and making conscious decisions using architectural drivers.
