dataset access management feature 83
datasets 145
dbt-trino adapter 235
DDD (domain-driven design) 38, 89, 91 – 92
decentralized data governance model 181
decentralizing responsibility 87
deduplication 106
design heuristics 114 – 118
    defined 115
    designing heuristics and possible boundaries 115 – 118
    aligning data products with consuming dashboard/visualization/BI tool 116 – 117
    aligning data products with domains/business capabilities 115
    aligning data products with personas of consumers 116
    aligning data products with possible usage or use cases 115
    aligning data products with source system 116
    aligning with organizational boundaries 118
    aligning with usage contract 118
    avoid data products with canonical model of whole enterprise 118
    build data product as registry for core business entity 117
    create data product for cohesive group of domain datasets 117
    using 115
Develop and plan the data governance program step 188
development cycle 52 – 55
    choosing business goal to enable with data 52
    collecting feedback about platform and analyzing shared needs 53 – 54
    defining needed data products 52 – 53
    developing data products 53
    developing platform 54 – 55
    establishing common policies and improving governance 54
    overview 45 – 47
    snow-shoveling business use case 48 – 49
Development of new data products connected data product 75
development teams 63 – 64
DevOps (development operations) 34 – 35
DevOps team 138 – 139
domain 35, 73, 89, 91, 100, 111 – 112
domain complexity 35
