

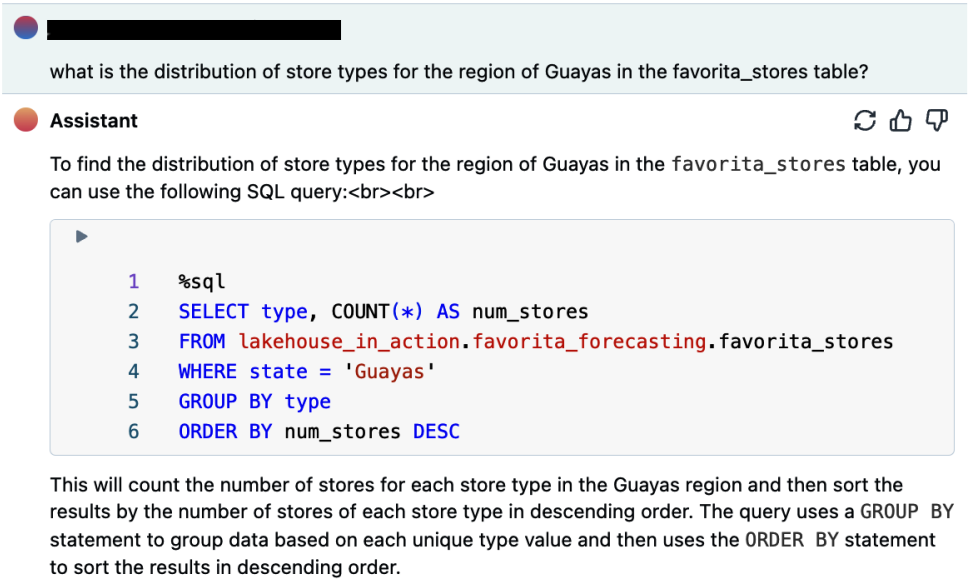

Figure 4.7 – The updated question submitted to Databricks Assistant and the results

After submitting the second question in *Figure 4.7*, Databricks Assistant provides a new query that accurately captures what we want to know. To make sure, let's copy the SQL code provided, paste it into a notebook, and run it.

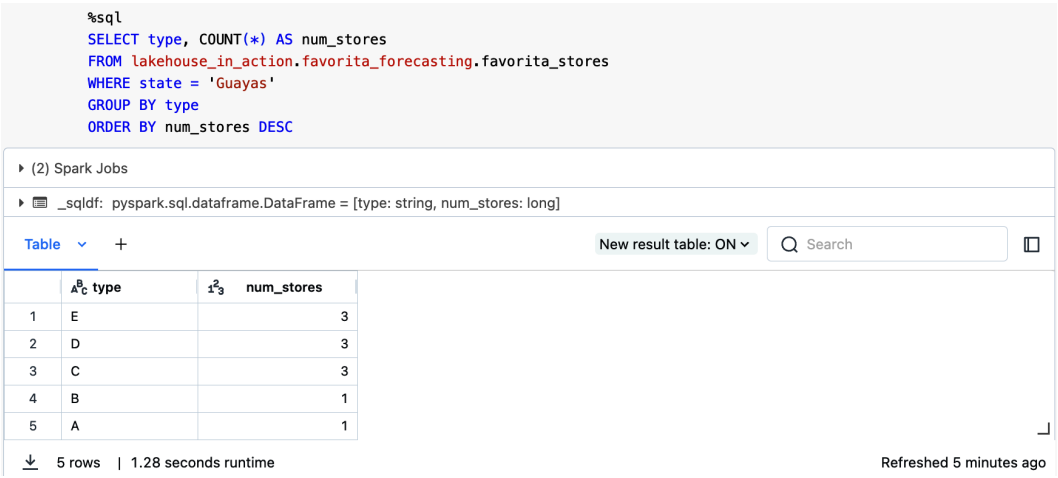

Figure 4.8 – Results from Databricks Assistant-generated SQL query

Now we see the distribution of stores by type in the Guayas region, just as we wanted. Databricks Assistant is a handy tool, and we can confirm that playing with it is also fun! We encourage you to try it out on your own to see how you can use English to explore your data.
