```
sql(
"""
CREATE OR REPLACE TABLE local_holidays_silver AS
SELECT
  `date`, store_nbr,
  CASE
    WHEN num_holidays >= 2 THEN "Multiple"
    ELSE local_holiday_type
  END as local_holiday_type
FROM
  (
    SELECT
      h.`date`, s.store_nbr,
      MIN(h.holiday_type) as local_holiday_type,
      count(1) as num_holidays
    FROM
      favorita_stores s
      INNER JOIN local_holidays_bronze h ON (
        s.city == h.locale_name
        OR s.state == h.locale_name
      )
    GROUP BY
      ALL
    ORDER BY
      h.`date`
  )
)
""")
```

Figure 5.37 – SQL checking for multiple holiday instances and identifying them with a new holiday type for the local holidays

The resulting silver table is shown in *Figure 5.38*:

date	store_nbr	local_holiday_type
2012-03-02 00:00:00.000	52	Holiday
2012-03-02 00:00:00.000	53	Holiday
2012-04-12 00:00:00.000	37	Holiday
2012-04-12 00:00:00.000	39	Holiday
2012-04-12 00:00:00.000	42	Holiday
