All that is left is to run both workflows simultaneously. After letting both run for a bit (don't forget to schedule the Production Batch Inference and Model Retraining workflow), you should have a screen that looks very similar to *Figure 7.29*.

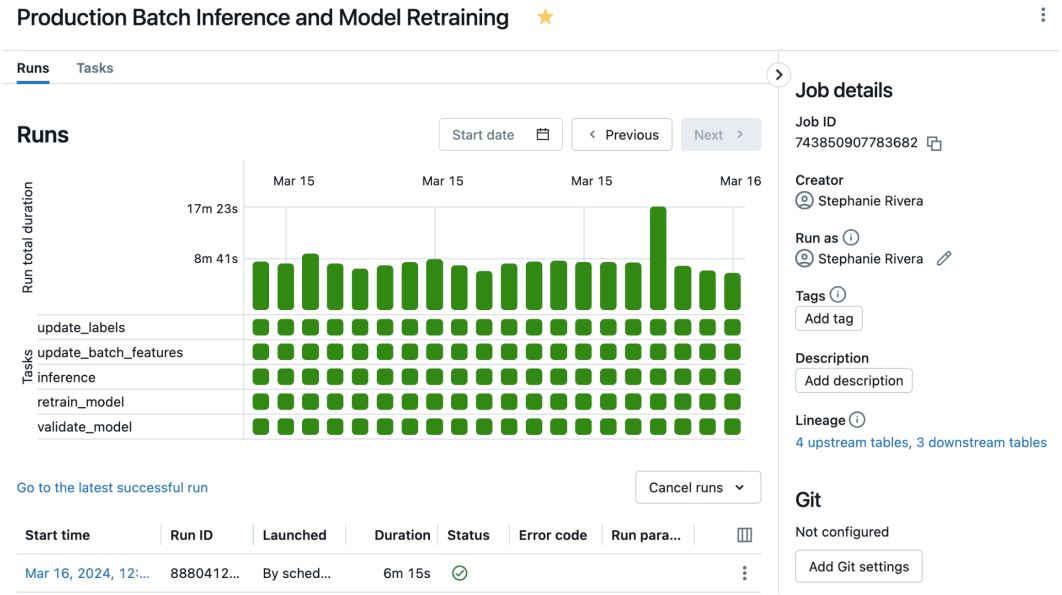

Figure 7.29 – The historical view of successful job runs

You now have all of the pieces for productionizing this project.

Project: Multilabel Image Classification

We currently have a working Image Classification model that we trained and evaluated in *Chapter 6*. Now let's add some infrastructure around our code to serve our model and make it available to downstream applications and, ultimately, our end users. To follow along in your own workspace, please open the following notebooks:

- `Ch7-01-Create Final Wrapper Production`
- `Ch7-02-Serve In Production`
