While interesting, what we really care about are the two metrics discussed earlier: correctness and professionalism. Take a look at the distribution of the correctness scores below.

```
# Counting the occurrences of each answer correctness score
px.bar(df_genai_metrics['answer_correctness/v1/score'].value_counts(), title='Answer Correctness Score Distribution')
```

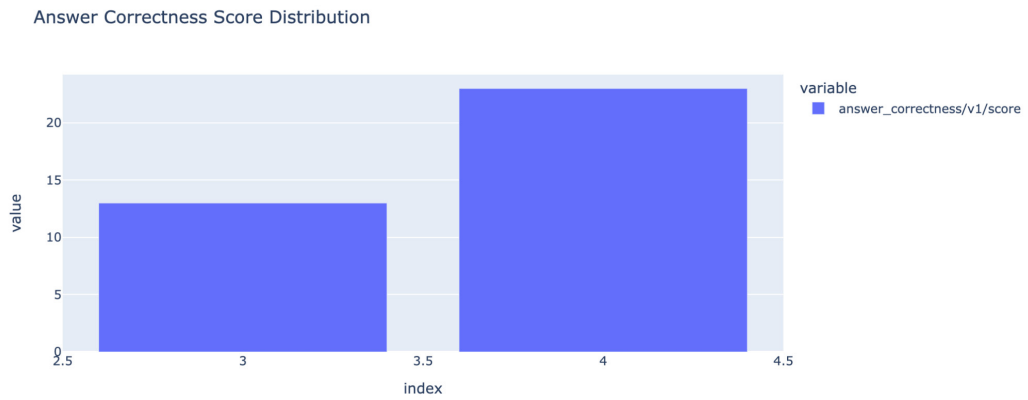

Figure 7.58 – Plotting the correctness score distribution

Let's also view the professionalism score distribution. Our distribution is threes and fours, which means the tone is most often "borderline professional," as we defined it in our custom metric.

```
# Counting the occurrences of each answer correctness score
px.bar(df_genai_metrics['professionalism/v1/score'].value_counts(), title='Answer Professionalism Score Distribution')
```

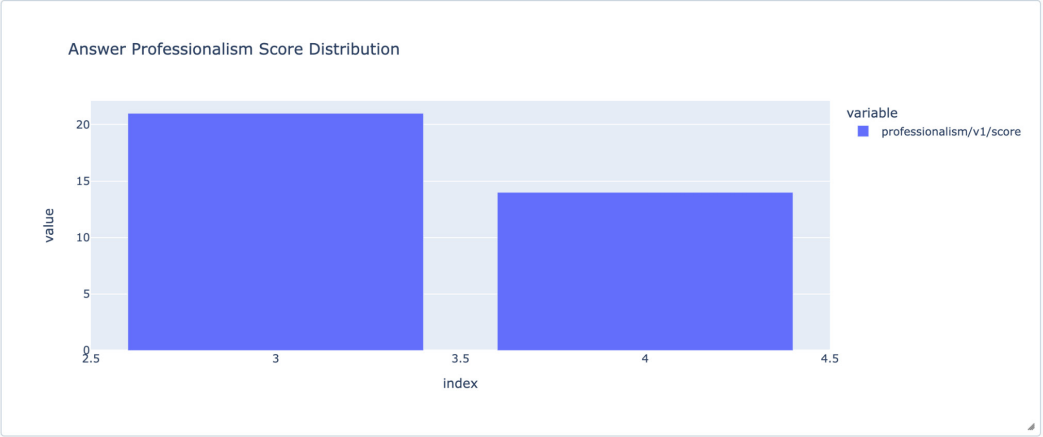

Figure 7.59 – Plotting the professionalism score distribution
