O

on-demand feature 111-112
building, with Python UDF 130-132
computing 116
online feature store 9
OpenAI 151
OPTIMIZE command 55

P

personal access token (PAT) 31, 235
point-in-time lookups 111
predictive optimization 55
primary tables 30, 82
Production Batch Inference 187
Production Streaming Transactions 187
Python UDF 224-226
used, for building on-demand feature 130-132
tips and tricks 226-230

Q

Query Federation 24

R

real-time data 114
REST API 180
Retrieval Augmented Generation (RAG) chatbot 11, 15, 16, 44, 45, 65-70, 85, 204
ground truth labels, loading 205, 206

S

schema evolution 9
Simple Storage Service (S3) 23
Spark Structured Streaming 51
used, for building streaming feature 119-129
SQL chatbot, with project table metadata
building 235
favorita store sales 236-240
retrieval-augmented generation chatbot 241-247
streaming transactions 240, 241
technical requirements 235
stateful streaming 115
streaming data 114
benefits 114
streaming feature 112
building, with Spark Structured Streaming 119-129
streaming pipelines 114
streaming transactions dataset
data solution 11, 12
Streaming Transactions Project 56, 57, 187-197
continuous data ingestion, using Auto Loader with DLT 60
continuous data ingestion, using Auto Loader with Structured Streaming 58-60
project pipeline for 157-164

T

time series feature tables
point-in-time lookups 115, 116
time series forecasting 132-137
training set
building 151-154
building, with feature tables 142, 143
transactionCount 132
