About the reviewers

Jeanne Choo studied plant biology and zoology at college, teaching herself how to code while doing so, to understand better how genes evolve over time. She was then hired by AI Singapore, a Singaporean government entity, as their first AI engineer. At AI Singapore, she was key in building the technical consulting practice, apprenticeship program, and technical stack from nothing. She set up the AI Apprenticeship Program, which won the Talent Accelerator Award Asia-Pacific IDC Digital Transformation Awards.

Most of Jeanne's work has focused on challenges specific to the Asia-Pacific region. Some past projects include building ML pipelines for Japanese search query understanding, training speech recognition models for Singlish, and building NLP models and corpora for Indonesian. At Databricks, she advises customers on best practices related to all things MLOps and generative AI.

Benjamin Faircloth completed a Master of Science degree in Data Science at Northwestern University. Ben is a key figure in AI and machine learning within the public sector. As a Delivery Solutions Architect and Embedded Product Lead at Databricks, he has driven significant enhancements in service delivery and innovation across top accounts. Ben's contributions to developing Databricks' delivery methodologies have streamlined processes and improved customer engagement. He led pivotal LLM hackathon initiatives with the Department of Defense, advancing AI capabilities crucial for national security. Throughout his career, Ben has witnessed the transformation from conceptual data architectures to the practical implementation of the lakehouse paradigm. At a significant moment in his career, as this book goes to press, his daughter Lydia is also entering the world, marking a personal milestone alongside his professional achievements. Committed to the mission, Ben strives to drive further innovation in applying advanced technologies to meet critical objectives.

Clever Anjos is a principal solutions architect at Qlik, a data analytics and data integration software company.

He has been working for Qlik since 2018 but has been around the Qlik ecosystem as a partner and customer since 2009. He is a business discovery professional with several years of experience working with Qlik, AWS, Google Cloud, Databricks, and other BI technologies.

He is a highly active member of Qlik Community, with over 8,000 posts and 4,500 page views.

In May 2022, he was named Qlik Community's featured member.
