```
.writeStream \
.format("delta") \
.outputMode("append") \
.option("checkpointLocation", checkpoint_location) \
.option("mergeSchema", "true") \
.trigger(processingTime="10 seconds") \
.toTable(tableName=table_name)
```

Figure 3.11 – Creating our checkpoint location, setting merge schema to true, and specifying processing to occur in 10 second micro batches

7. The trigger is the last line that may need explanation, as shown in *Figure 3.11*. The trigger setting refers to the processing pace. Our data from the generation notebook is continuous. Here, we efficiently handle it with ten-second micro-batches.

In *Step 7*, we use a trigger with a processing time. The processing time means micro-batches of data will be processed every ten seconds. Suppose you do not require micro-batches. If you need your data processed once an hour or once per day, then the `trigger.availableNow` option is best. When you use the `trigger.AvailableNow` as your pipeline trigger, the pipeline will kick off as scheduled in Jobs, aka Workflows, using a job cluster. At that time, Auto Loader will process all data available and then shut down.

You are finished reading and writing with Auto Loader plus Spark Structured Streaming. Next, we'll show you how to accomplish the same task with Delta Live Tables (in less code!).

Continuous data ingestion using Auto Loader with Delta Live Tables

This section uses the Auto Loader code to read the stream of JSON files and then DLT to write the files to a table. This notebook is under the `delta_live_tables` folder and is titled `CH3-03-Formatting to Delta with DLT`.

The only import you need is DLT: `import dlt`. The DLT code is relatively short partly because the pipeline configuration occurs in the pipeline object rather than the code. Before we look through our source code, let's navigate to the Delta Live Tables tab of the Worklows pane by selecting **Delta Live Tables** in the left-hand navigation bar. Next, click **Create Pipeline**, which opens the Pipeline settings page, as shown in *Figure 3.12*.
