

First on the menu are `before` and `after`. Dig in.

6.4.2. Before and after

Suppose Agtron needs to meet some incredibly bizarre bureaucracy requirements and tells you that you have to log every product that's sold to an external service. You don't have to worry about the service itself, because there's an existing `auditLog` function that does it for you.

There's an existing `sale` function, so you could just chuck an invocation of `auditLog` in there:
