Surely typeof is used sometimes in CoffeeScript?

Yes. The `typeof` operator is sometimes useful for distinguishing between built-in types. If you're writing library code, you may have good reason to determine if something is `typeof function`, `object`, `string`, or `number`. For anything else, steer clear of `typeof`.

Duck typing is a way of thinking. In a dynamic language like CoffeeScript that doesn't enforce types, you don't look at the type but instead look at the actual object you're dealing with. With duck typing you can express programs naturally in CoffeeScript.

Finally, the following listing provides a server that you can use to experiment with the browser code in listings 7.1 through 7.4.

Listing 7.5. The server

```
http = require 'http'
fs = require 'fs'
coffee = require 'coffee-script'

render = (res, head, body) ->
  res.writeHead 200, 'Content-Type': 'text/html'
  res.end """
    <!doctype html>
    <html lang=en>
      <head>
        <meta charset=utf-8>
        <title>Chapter 7</title>
        <style type='text/css'>
        * { font-family: helvetica, arial, sans-serif; }
        body { font-size: 120%; }
        .teams td { padding: 5px; }
        </style>
        #{head}
      </head>
      <body>
        #{body}
      </body>
    </html>
  """

listing = (id) ->
```
