Your mission, should you choose to accept it, is to create a real-time dashboard for Agtron. In figure 11.1 you see Agtron's back-of-the-envelope drawing of how he wants the dashboard to look when viewing the status for a single server. It looks a bit like a heart-rate monitor found in a hospital.

Figure 11.1. Agtron's dashboard

This is going to be a browser-based dashboard, so you start with the basic HTML in the following listing.

Listing 11.1. The basic HTML page

```
<!DOCTYPE html>
<html dir='ltr' lang='en-US'>
  <head>
    <meta http-equiv='Content-Type' content='text/html; charset=utf-8'>
    <title>Radiator</title>
    <style type="text/css">
    html, body { padding: 0; margin:0; }
    </style>
    <script src='status.js'></script>
  </head>
  <body>
    <div id='status'></div>
  </body>
</html>
```

This status.js file is compiled from the CoffeeScript in listings that appear later in this chapter.
