

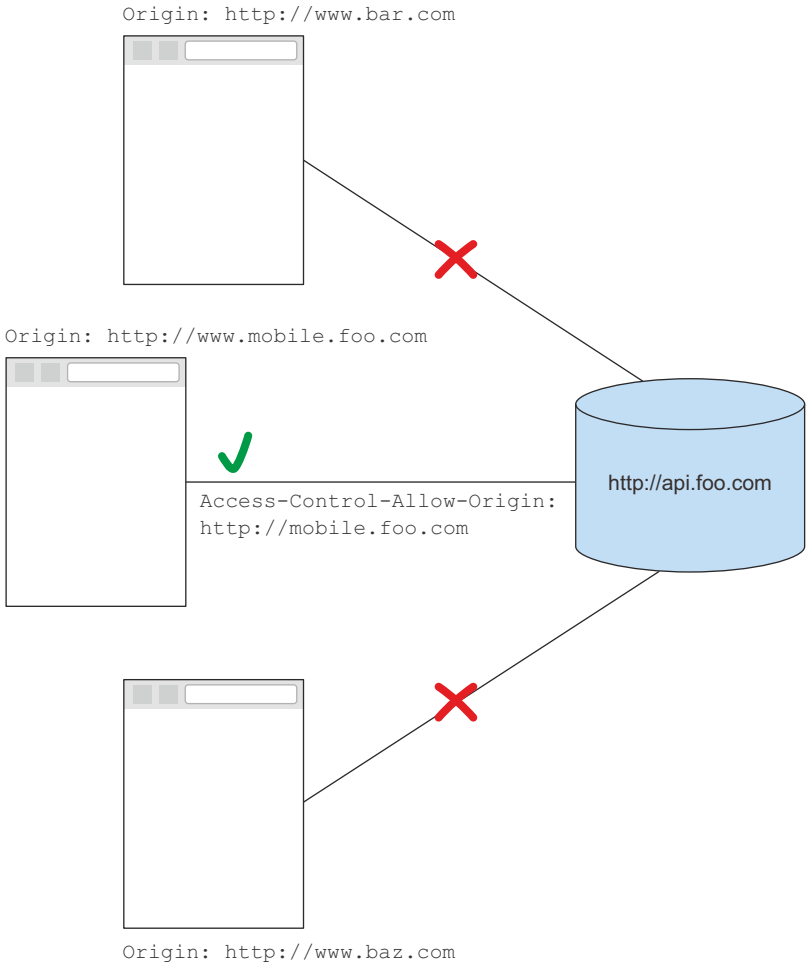

Figure 3.21 The Access-Control-Allow-Origin only allows access from http://mobile.foo.com.

When you last modified the sample app, you updated the Access-Control-Allow-Origin header to only allow cross-origin requests from http://localhost:1111. Requests from any other origin will be rejected.

Table 3.5 How the browser reacts to server responses

Client request	Server response	Browser behavior
`Origin: http://localhost:1111`	None	Error. No Access-Control-Allow-Origin header.
`Origin: http://localhost:1111`	`Access-Control-Allow-Origin: *`	Success.
